

StudsDirect Ring Sizer

US Sizes 4-13 | Print at 100% Actual Size | Do NOT scale or fit to page

STEP 1 Verify calibration before cutting

Hold a real ruler to the 1-inch square. Hold a US dime to the dime circle. Both must match. If not, reprint at 100% Actual Size.

Calibration checklist:

- 1-inch square = 1.00 inch on ruler
 - Dime circle matches real US dime
- If either fails: reprint at Actual Size.
 iOS: share PDF to Files app, then print.
 Never size from a phone screen.

STEP 2 Cut out the sizer strip below

Cut along the dashed border. Slide the pointed end through the slot to form a ring. Tighten on your finger. Read size at the arrow.

Measure at end of day when fingers are largest. Between sizes? Go up - never down.

STEP 3 Read your size

The US size number at the arrow = your ring size. If between marks, order the higher size.

Sizing rules:

- Between two marks? Go up (larger) - a slightly loose ring is easier to resize than a tight one.
- Wide band (6mm+)? Size up 0.25 for bands 5-7mm wide; size up 0.5 for 8mm+ wide bands.
- Knuckle larger than base? Size for the knuckle - the ring must pass over it to get on.
- Hot weather adds +0.25 size. Cold weather subtracts 0.25. Measure at comfortable room temperature.

Quick reference

4	4.5	5	5.5	6	6.5	7	7.5	8	8.5	9	9.5	10	10.5	11	11.5	12	12.5	13
